

If you ever wanted to print out an MS Word document on a colored page, you would likely just type the document out on a plain white background and insert a colored page in the printer when you print it. The same can't be said if you want to add an image to the background of a page. There's the watermark option to make do with but if you're interested in adding a full page background image to a document and have it tile properly if needed, there's a built-in feature to do just that.

Open the MS Word file you want to add an image background to. Go to the 'Design' tab and click the 'Page Color' drop-down in the 'Page Background' set of tools. A pop-up menu will open with colors to set as the background. At the very bottom of this pop-up is an option 'Fill Effects'. Click it.
